

QA/Manufacturing Technician required

CIRCA £17k-19k pa

Edinburgh based Reactec Ltd works on noise and vibration related issues through products, consultancy and design services across a range of industry sectors.

With the imminent launch of an exciting new product for the power tools in the construction and manufacturing industry, Reactec is looking for a QA/Manufacturing Technician to join our team as we launch volume production of the HAVmeter. Additional responsibilities, at least initially, include taking first line technical support calls.

This job offer presents an exciting opportunity to work with a new technology, and to develop and enhance your career in an independent and highly motivated working environment.

Responsibilities

Your duties will include:

- Book in and quality control of deliveries from suppliers
- Preparation of units for shipment
 - o Final test
 - o Software upgrade
 - o Packaging
- Stock control of finished goods
- Failure analysis of returned units
- Repair of failed units
- Maintenance of statistics on failure levels, investigate trends
- Set up documentation and control systems to achieve the above
- Respond to customer technical support calls
- Contribute to other aspects of the company's work on an occasional basis e.g. customer installations

Core skills

Candidates should have:

- An HNC or better in a relevant discipline
- Experience of board level debug
- Experience of board level repairs on SMT PCBs
- Ability to work with little supervision
- Organised mentality – ability to set up procedures
- Willingness to contribute in areas outside core responsibilities
